### **Custom Assembly Systems**

All equipment and plastic assembly systems offered by PAS are designed to be used in manual, semi-automated, or fully automated production lines. Most application and production requirements can be met using our standard automation systems, which include assembly process heads, actuators, thrusters and modular process control packages that are specifically designed for custom systems integrators, automation work-cells and assembly lines.

- Rotary Dial Index Tables
- Walking Beam
- In-Line
- Pick and Place
- Robotics
- Vision System Inspection
- Automatic Part Feeding
- Continuous Motion
- Self-Teach Positioning Units X, Y, and Z axis
- Precision Link Conveyors
